HTTPCore

Set up

1. Download and extract <link>
2. In IntelliJ: "Import project" and select HTTPCore folder
3. "Import project from external model" and select "Maven"
4. Make sure "Search for projects recursively" is selected

Important classes

- For DAPs with context like "when creating a message", consider subclasses of org.apache.http.io.SessionOutputBuffer, which turns library entities (e.g. HTTPHeader) into text to send through a connection
- For context "when receiving/parsing a message" consider subclasses of org.apache.http.nio.NHttpMessageParser, these parse the text received into library entities. org.apache.http.HttpResponseFactory and org.apache.http.HttpRequestFactory are also involved in creating these entities
